

Flexible Data Formats

Log onto [Mode Analytics](#) and from the home page, create a new report by clicking on the green plus sign button in the upper right-hand corner. Enter the starter code provided for each exercise. You may want to create a new tab for each exercise.

Please use the discussion forum for any questions and/or comments you might have. Once you have tried the exercises, feel free to watch the solutions video. Good luck with your practice!

Exercise 1:

Goal: Write a query to format the view_item event into a table with the appropriate columns

Starter Code:

```
SELECT
  *
FROM
  dsv1069.events
WHERE
  event_name = 'view_item'
```

Exercise 2:

Goal: Write a query to format the view_item event into a table with the appropriate columns (This replicates what we had in the slides, but it is missing a column)

Starter Code:

```
SELECT
  event_id,
  event_time,
  user_id,
  platform,
  (CASE WHEN parameter_name = 'item_id'
        THEN CAST(parameter_value AS INT)
        ELSE NULL
       END) AS item_id
FROM
  dsv1069.events
WHERE
  event_name = 'view_item'
ORDER BY event_id
```

Exercise 3:

Goal: Use the result from the previous exercise, but make sure

Starter Code: (Ex#2)

```
SELECT
    event_id,
    event_time,
    user_id,
    platform,
    (CASE WHEN parameter_name = 'item_id'
         THEN CAST(parameter_value AS INT)
         ELSE NULL
        END) AS item_id,
    (CASE WHEN parameter_name = 'referrer'
         THEN parameter_value
         ELSE NULL
        END) AS referrer
FROM
    dsv1069.events
WHERE
    event_name = 'view_item'
ORDER BY event_id
```
